BASIC-ABSTRACT:

The electronic program guide (EPG) directs TV viewers in an efficient manner to the TV programs broadcasting on different channels. One of the EPG facilities enables the viewer to have an on-screen overview of all programs currently being broadcast. Displayed with each program is a graphic representation of the period of time which has elapsed since the relevant program started.

This period pref. relates to the length of the program. The viewer can thus see at a glance how far a program has already progressed. The receiver determines the time lapse of each program (current time minus start time of the program), computes the corresp. portion of the program's length, and displays the result in the form of a bar.

ADVANTAGE - EPG provides facilities such as automatic programming of a video recorder or reminding a viewer that a desired program is about to be broadcast.
